

Climate change is important for Honolulu

Climate change is worse than the Pandemic? Pollution in cities today cause more deaths than the disease. Here in Hawaii we are blessed with being far away from major polluting areas so our air and water is better than most. But pollution and climate warming is destroying reefs, the sea level is rising, and pollution and congestion is affecting our quality of life in the World and here in Hawaii.

Honolulu needs to address the pollution that we create. Reducing carbon emissions, not dumping sewerage into the ocean, not using chemicals in our homes, our farms, our businesses, not putting anything unnatural into the environment to include our bodies is the 'Pure Hawaii' brand for living and addressing climate change.
