5G Technologies affect Health and Safety

1) What is the candidates stand on stopping 5G?

Stopping 5g is important for our Health and the Environment

2) Is the candidate willing to make stopping 5G a campaign issue that is part of their platform?

Duke4Mayor incorporates Stopping 5G as a platform campaign issue.

3) Is the candidate willing to sponsor legislation to stop 5G?

Duke4Mayor.com will sponsor legislation to stop 5G.

4) If so, what specifically?

Legislation proposed to educate and protect the People from the harm of 5G:

- A. Submit to the Council and the State Legislature a moratorium on 5G construction and use.
- B. Create corridors down main streets with optic cable fiber for a better, safer, and faster public service to allow connection to the internet without 5G or 4G. Move service to community upon request.
- C. Purchase and develop neutralizing methods to protect citizens from this EMF Electromagnetic Radiation on main streets,

schools, parks, and other public places where citizens request this protection.

- D. Plant more trees throughout the City and Island.
- E. Research and develop an immune defense program for people to protect themselves from the scientifically detailed health risks from these electronic fields.
- F. Promote organic farming like [greenverdefarms.com](http://greenverdefarms.com) for self sufficiency communities living without the use of 5G or Wi Fi.
- G. Educate Citizens on electromagnetic radiation, (non-ionizing radiation, microwave radio frequency radiation). (5G utilizes much higher radio frequencies (28 Ghz compared to 700 Mhz - 2500 Mhz for 4G/( Wi-Fi is 2.4 GHz)). 4k video would use 5G, but for the average user of live streaming or downloading HD video is very achievable using a 4G network. 5G will emit 10 times more radiation as it will use frequencies which are ten times higher than those used by current network technologies. Both the cellular masts and proposed 20,000 5G satellites will utilize a system called the “phased array” where beams are concentrated to add power, which means they are able more easily to penetrate buildings. But it also means that any living creature that gets in the way of such a concentrated beam will be subjected to a powerful dose of extremely high frequency radiant electricity. 5G requires many more cell towers than those used today. Our exposure to this already dangerous radiation is going to increase exponentially and pose even greater challenge to our health (Dr Axe). Cell phone towers will increase to millions of towers, as 5G requires a much denser network, possibly towers on every street corner.
